## PHOTO RELEASE: McMichael receives Navy Meritorious Civilian Service Award

---

Roy Harris, director, Aviation Readiness and Resource Analysis Department, Naval Air Systems Command (NAVAIR) (AIR-6.8), right, presents Elizabeth McMichael, Additive Manufacturing Integrated Program Team lead, Department of the Navy Meritorious Civilian Service Award for her work to incorporate additive manufacturing into Naval Aviation maintenance. Thanks to McMichael and her team, an MV-22B Osprey equipped with a 3-D printed titanium link and fitting inside an engine nacelle flew during a July 29 demonstration at Patuxent River Naval Air Station, Maryland. The flight marked NAVAIR's first successful flight demonstration of a flight critical aircraft component built using additive manufacturing techniques. (U.S. Navy photo/released)
